NIH CLINICAL RESEARCH TRIALS AND YOU

Why Should I Participate in a Clinical Trial?

Clinical trials are part of clinical research and at the heart of all medical advances. Clinical trials look at new ways to prevent, detect, or treat disease.

Treatments might be new drugs or new combinations of drugs, new surgical procedures or devices, or new ways to use existing treatments.

The goal of clinical trials is to determine if a new test or treatment works and is safe. Clinical trials can also look at other aspects of care, such as improving the quality of life for people with chronic illnesses.

People participate in clinical trials for a variety of reasons. Healthy volunteers say they participate to help others and to contribute to moving science forward. Participants with an illness or disease also participate to help others, but also to possibly receive the newest treatment and to have the additional care and attention from the clinical trial staff.

Clinical trials offer hope for many people and an opportunity to help researchers find better treatments for others in the future.

Why Should I Join a Clinical Trial?

Have you considered participating in a clinical trial? Dr. Griffin Rodgers, director of the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) at the National Institutes of Health, discusses the role that clinical trial volunteers play in improving the health of current and future generations.
